Quality: Phrap Quality >=40 99.1% of Sequence;
Quality: Phrap Quality >=40 99.1% of Sequence;
Mumber of Errors is 0.
NOTE: This sequence as not the entire sequence of the clone. It is sequence generated to span the gap between AC008540 and AC008666. The overlap with AC008540 is 652bp and the overlap with AC008666 is 1018bp. The sequence was finished by the Stanford Human Genome Center and Los Alamos National Laboratory.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WO200172295-A2. Homo sapiens.

04-OCT-2001.

Human; lung tumour protein; immunostimulant; cytostatic; gene therapy; antisense-therapy; vaccine; immune response; lung cancer; 20E10; ss. Human lung tumour-specific 20E10 5' cDNA. 26-FEB-2002 (first entry) AAD23462;

```
The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting useful for stimulating an immune response, and for treating cancer. The invention also relates to a composition lung tumour specific oligonacleotide is useful in gene therapy and for diagnosis, detection and treatment of lung cancer. The present sequence is a cDNA encoding human lung tumour-specific protein.
                                                                                                                                              Reed SG, Lodes MJ, Mohamath R, Secrist H, Benson DR, Indirias CY;

The invention relates to isolated lung tumour-specific proteins and their corresponding cDNA molecules. Lung tumour-specific proteins and their antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting useful for stimulating an immune response, and for inhibiting useful for stimulating an immune response, and for treating cancer. The lung tumour specific oligonalcolectide is useful in gene therapy and for diagnosis, detection and treatment of lung cancer. The present sequence is a cDNA encoding human lung tumour-specific protein.

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12332 to AAZ1779. Also described is comprising the sequences given in AAZ12332 to AAZ1779. Also described is comperising the sequences given in a test sample from a cell differentially expressed gene product in a test sample from a cell calferentially expressed gene product in a test sample from a cell calferentially expressed gene product in a test sample from a cell calferentially expressed gene product in a test sample from a cell calferentially expressed gene product in a test sample from a cell calferentially expressed generces given in AAZ12323 to AAZ17779. The colynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct therapeutic purposes. The polynucleotides may also be used to construct carneys for diagnostics (which may be used to determine function of an arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to two cells (e.g. to identify abnormal or diseased tissue in a human, to cancer). The polynucleotides of the invention are especially used in the cancer. The polynucleotides can also be used to screen for

ABL36412 to ABL38645 represent human colon tumour antigen cDNA clones (I) which were isolated from human colon tumour and colon metastatic tumour cDNA libraries. (I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be must a sprobes or primers for nucleic acid hybridisation, for preparing can be used in the diagnosis of a colon tumour.

The invention relates to an isolated polynucleotide (I) encoding a polynucleotide (II) comprising at least a portion of a colon tunnour protein. (I). (II) and antibody (III) to (II) are useful for determining the presence of a cancer in a patient. (I). (II) or antigen presenting cells expressing (I) is useful for stimulating and/or expanding T cells antigen-presenting cells that express (I), under conditions and for a cime sufficient to permit the stimulation and/or expansion of T cells. (I). (II) or antigen presenting cells that express (II) are useful for isolated from a patient with (I). (II) or antigen presenting cells that express (II) are useful for isolated from a patient with (I). (II) or antigen presenting cells that corporation and administrating to the development of a cancer in the proliferated T cells, thus inhibiting corporation and pharmaceutical compositions for prevention and treatment confocial and for the diagnosis and monitoring of such cancers. (I). (II) or (III) is useful for detection, diagnosis and/or concers. (I). (III) or (III) is useful for detection, diagnosis and/or therapy of human colon cancer. (I) is useful as a probe or primer for ribozyme molecules for inhibiting expression of (II) in the design and preparation of cancers and animars of the invarient colon cancer coding
                                                                                                                                              Novel isolated polynucleotide encoding a polypeptide comprising a portion of colon tumour protein, useful for detection, diagnosis and

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The utilities of the diagnosis, treatment and prevention of: (a) cancer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune (d) immune disorders e.g. Addison's disease, allergies, autoimmune (d) immune disorders e.g. Addison's disease, allergies, autoimmune (d) wound healing; (e) neurological diseases e.g. cerebral anothe and parasitic infections diseases such as viral, bacterial, fungal cand parasitic infections diseases such as viral, bacterial, fungal Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly xxx
                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 GluValGlu------ValSerArgAspHis-----AlaSerLeu-----Gly---Asp 13

(HUMA-) HUMAN GENOME SCI INC

Ruben SM,

Rosen CA, Barash SC,

New isolated ovarian and/or breast cancer related nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders, particularly ovarian and/or breast cancer WPI; 2001-488786/53.

Disclosure; SEQ ID NO 711; 577pp + Sequence Listing; English.

The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are

21-NOV-2001 (first entry)

```
isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant)agonists are useful
in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
and ovarian cancer and other cancers of the adrenal gland, bone, bone
the information cancer and other cancers of the adrenal gland, bone, bone
information information in tract, liver, lung, or urogenital;
the mannylic anaemia, autoimmune thyroiditis, diabetes mellitus, or anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's
collitis; (c) cardiovascular discorders such as myocardial isohaemias;
collitis; (c) cardiovascular discorders such as myocardial isohaemias;
collitis; (c) and (f) infectious diseases e.g. cerebral anoxia and and parasitic infections.
Condition infections diseases such as viral, bacterial, fungal
Note: The sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
eventuated the sequence of the condition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 GluValGlu-----ValSerArgAspHisAla---SerLeu-----Gly---AspSer 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 744 AAAAGAGTAAAC---AACTATATG---AATATGTTAGTTTCAGTAGTAATCAGGACAGTG 797

```
The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1080 TGAGCTCAAGCAATCCGCCCACCTTGGCCTCCCAAAGTACTGGGGTTACAGGCGTGAGCC 1139

The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating (ABB10743-ABB10980) useful for preventing, treating or maniorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful the high acancer, and other cancers of the adrenal gland, bone, bone arrow, breast, gastrointestinal tract, liver, lung, or urogenital; marrow, breast, gastrointestinal tract, liver, lung, or urogenital; hamolytic anaemia, autoimmune thyroidilis, diabetes mellitus, Crohn's hamolytic anaemia, autoimmune thyroidilis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative disease, multiple sclerosis, rheumatoid arthritis and ulcerative (b) wound healing; (e) neurological diseases e.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal contined specification, but was obtained in electronic format directly from wide the property and or trive, which is the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             745 AAAAGAGTAAAC---AACTATATG---AATATGTTAGTTTCAGTAGTAATCAGGACAGTG 798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           694 AAGACTITGTCTCAA-----AAAAAAAAAAAGACCTACTCTATAGGAAAGCAATTCAG 744

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, proclaing cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 6422; 1297pp + Sequence Listing; English.

suspected of having endometrial cancer comprising determining the expression of a set of nucleic acid molecules or expression products in an endometrial sample suspected of being cancerous, where the set of nucleic acid molecules comprises at least 2 nucleic acid molecules comprises at least 2 nucleic acid molecules comprises at least 2 of the Stock of the nucleic acids are used as an array of at least 2 of the Stock or nucleic acids bound to a solid substrate. Also included is a solid phase comprising at least 2 antibodies or its antigen protein microarray comprising at least 2 antibodies or its antigen compressing at least 2 different binding fragments, that specifically bind at least 2 different components from the 50 fully defined sequences as given in the specification, fixed to a solid substrate. The methods and arrays are specification, fixed to a solid substrate. The methods and arrays are treatment regimes and identification of lead compounds useful for the treatment of endometrial cancer, selecting and monitoring creatment of endometrial cancer. The present sequence is one of 50 treatment of endometrial cancer. The present sequence is one of 50 treatment and identification of lead compounds useful for the control of endometrial cancer. The present sequence is one of 50 treatment of endometrial cancer. The present sequence is one of 50 treatment present sequence and non-cancerous

The invention relates to an isolated polypeptide comprising an amino acid sequence at least 90% identical to 188 amino acid sequences fully defined in the specification and encoded by 188 cmbx clones fully having biological activity, a domain, an epitope, full length protein, variant, allelic variant or a species homologue of the fully defined sequence. The polypuclectide and polypeptide are useful for treating, proventing and/or prognosing disorders related to the pancreas including pancreatic cancer, pancreatitis, diabetes, endocrine disorders such as acromegaly or hyperthyroidism, and gastrointestinal disorders such as pencreatic cancer-related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                          Isolated pancreatic cancer polypeptide for treating, preventing and/or prognosing disorders related to the pancreas including pancreatic cancers and also for testing and detection e.g. diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2012 GAGGCGGAGGTTGCAGTGAGCCGAGATCACACCATTGCA---CTCCAGCCTGGGCAACAG 1956

The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2197 BP; 493 A; 500 C; 602 G; 602 T; 0 other;

```
The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are cc isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone and ovarian cancer and other cancers of the adrenal gland, bone, bone cc marrow, breast, gastrointestinal tract, liver, lung, or urogenital; CC marrow, breast, autoimmune thyroiditis, diabetes mellitus, crohn's colitis; (c) cardiovascular disorders such as myocardial ischaemlas; colitis; (c) cardiovascular disorders such as myocardial ischaemlas; colitis; (c) infectious diseases such as viral, bacterial, fungal and parasitic infections.

CC do wound healing; (e) neurological diseases such as viral, bacterial, fungal and parasitic infections.

CC do man parasitic infections.

CC printed specification, but was obtained in electronic format directly considered at a ftp. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1651 GACCCAAAATTTGTGTCAGCAACAAAACACGAAATCGCTGATGCCTGTGACCTCACCATC 1592

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                       (without alignments)
